

## WALKING TRACTOR

(MODEL: GN121)

### FEATURES AND USAGE

Walking Tractor Model GN121 is designed of pulling and driving. The model features output at high and low speed, compactness and simplicity of construction, easy control and steering, light weight, rugged durability and reliability. It is suitable for working in dry and paddy field, orchard and slightly hilly land completed with driver's seat and farm implements, such as plough, rotary tiller, disc plough, ditcher and harvester etc. Walking Tractor Model GN121 can also be used as transportation vehicle matched with trailer and as a power in the rural area for stationary work such as pumping, spraying, feed grinding, flour milling and trenching etc.

Walking Tractor Model GN121-(15) is a strengthened variety model in chassis and power output based on Model GN121 so that the productivity can be greatly raised.

Walking Tractor Model GN121H is improved model for some special agronomic need in some districts based on GN121 by increasing wheelbase and minimum ground clearance.
